

## TURNING TABLE T.R. 300

### Overview

#### TURNING TABLE T.R. 300

cod. 802331

The turning table enables the mechanisation of circumferential weldings on vertical and horizontal axes with phased angles of inclination. The fact that operators can accurately set the rotation speed and adjust the table inclination angles in seconds, makes it so much easier to perform circular joints using all arc-welding procedures whilst improving quality, dimensional consistency and rates of productivity. It comprises two separate elements which are connected via an electric cable: control unit and positioner with geared motor and attachment for the return cable of the welding current. It is possible to connect the optional pedal remote control.

### Technical data

**CODE** CODE 802331

**V<sub>1PH</sub>** SINGLE PHASE MAINS VOLTAGE 230 V

**BAR CODE** EAN CODE 800489728364 7

**F** MAINS FREQUENCY 50 / 60 Hz

**kg** WEIGHT 24,8 kg
